

**FROM NOW ON, CLEAN YOUR
VENTILATION DUCTS WITH MOBBIT**

Thorough and efficient

WHAT'S A MOBBIT?

MOBBIT, THE FIRST SYSTEM THAT THOROUGHLY CLEANS VENTILATION DUCTS

The MOBBIT is an innovative and convenient tool for cleaning ducts in type C and D ventilation systems. The MOBBIT can also be used to clean earth tubes and other duct systems. A-priori, the company behind MOBBIT, has patented this innovative product that is based on bi-component microfibre. It is the first system to use mopping action to thoroughly clean ventilation ducts.

WHY IS MOBBIT INDISPENSABLE?

Multiple studies have shown that the efficiency of a mechanical home ventilation system drops to only 50% within 2 years. Due to the amount of dust that remains trapped in the ducts and the extractor, efficiency deteriorates rapidly, leading to the spread of bacteria and germs in the home. The failure to maintain ventilation ducts poses a health hazard and can result in unpleasant odours in homes and apartments. And the capacity and the performance of the ventilation system is less effective and less efficient due to the accumulated contamination in the ducts. Possible consequences? Unhealthy living conditions and an increase in energy consumption and noise.

"MOBBIT was developed at the request of the many people who rightly questioned the effectiveness of the methods used to clean their ventilation systems. Our revolutionary tool now offers an effective answer."

SAVE TIME ...

MOBBIT takes away all your worries as an installer. Literally and figuratively. No more lugging large vacuum cleaners and cable reels that take up too much space in the van. Done with complicated methods and elaborate manuals. Anyone, male or female, can install the Mobbbit and the associated case without problems, in less than 5 minutes. Done with cutting pipes or dismantling casing, which can lead to additional costs.

.... AND MONEY

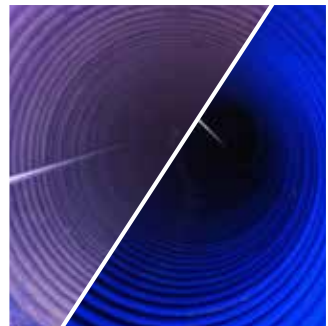

For the low price of Mobbbit, you get a lot: considerable savings in time, greatly enhanced ease of use, healthy air quality, satisfied customers, clean ventilation systems ... In short, MOBBIT is an indispensable tool that deserves a place in your van!

QUICK AND EASY TO USE

MOBBIT cleans ventilation ducts efficiently and thoroughly. No other system compares. Standard systems on the market today brush the ducts clean and vacuum up the loosened dust. These methods no doubt still leave dirt and bacteria behind. They are cumbersome, time-consuming and unpleasant for the homeowner. MOBBIT is different: it is the only method that uses only water and detergent. MOBBIT mops clean earth tubes and interior ducts with water and soap, between air inlets/outlets. It is quick and easy to use. The result? Ventilation systems that are truly clean and healthy.

"Economical, highly flexible and easy to use, that's MOBBIT."

Before

After

HOW DOES MOBBIT WORK?

REVOLUTIONARY TOOL

The MOBBIT 'mops' ventilation ducts clean with a mixture of water and detergent. The device, a ball-shaped volume with synthetic extensions or bumps, does not use brushes or circular movements, and therefore will not damage ducts. Thanks to its unique and intelligent structure, MOBBIT is able to clean different diameter duct systems. Continuous contact between the MOBBIT and the duct wall ensures that the entire wall surface is thoroughly cleaned.

The structure of the ducting network is decisive for the proper cleaning of a ventilation system. The diameters and lengths of the various ducts determine the type of MOBBIT to be used. MOBBIT system components are available in different sizes to meet everyone's needs.

CLEANING VENTILATION DUCTS? SUPER FAST CHILD'S PLAY!

A rope is pulled into the ducting network using a traditional vacuum cleaner. This rope is attached to the MOBBIT soaked in water and detergent. The MOBBIT is repeatedly pulled through the pipe until return water from the MOBBIT is clear and the dirt is gone.

The cleaning is done between existing air inlets/outlets. Thus inspection hatches are no longer necessary and disassembling the components of the ducting network are a thing of the past.

THE POWER OF MICROFIBRE

The MOBBIT sleeve is made of a bi-component microfibre with a super-cleaning surface that results in a powerful capillary effect. Due to the chemical splitting of the material, there is an exponentially large surface area with which the mixture of water and detergent can absorb the dirt. Now that's easy!

THE MOBBIT IN A NUTSHELL

- A bumpy structure that penetrates overall, even uneven surfaces
- A high degree of flexibility and mobility for working inside ducting
- A central ring that ensures no clinging
- A special seam without loss of surface bumps
- A zipper encloses the inner works
- A strongly made unit
- Dense number of bumps
- Different diameters possible
- Capillary effect of the textile
- Mopping instead of brushing action
- *And this for a very affordable price!*

MOBBIT & DUCTS: THE PERFECT MATCH!

Want your ventilation systems to be truly clean without major equipment or hours of work? Order the MOBBIT now! Send an e-mail to info@mobbbit.be or call + 32 475 86 20 52. Your ducts will thank you!

SYSTEM COMPONENTS

MOBBIT sleeve

Sleeve made of bi-component microfibre with zipper and ring

<i>article NO</i>	<i>diameter (mm)</i>	<i>colour</i>
MH-200	200	blue
MH-160	160	blue
MH-100	100	blue

MOBBIT pulling tool

Aluminium handle

<i>article NO</i>	<i>length (mm)</i>	<i>rope diameter (mm)</i>
MT-1	189	3 to 6

MOBBIT cap

Plastic cover with vacuum cleaner connector

<i>article NO</i>	<i>diameter (mm)</i>	<i>colour</i>
MD-200	200	blue
MD-180	180	blue
MD-160	160	blue
MD-125	125	blue
MD-100	100	blue

MOBBIT rope

Polyester rope with core

<i>article NO</i>	<i>length (m)</i>	<i>rope diameter (mm)</i>
MTD-1	100	4
MTD-2	100	2

MOBBIT brush

PVC core brush

<i>article NO</i>	<i>diameter (mm)</i>
MB-200	130
MB-160	100

MOBBIT wrench

Cut steel wrench

<i>article NO</i>	<i>type</i>
MS-1	toothed
MS-2	screw
